

Cyber Threat Intelligence Report

Project Title: OSINT-Based Threat Intelligence Assessment

Target Organization: VFS Global

**Industry/Sector: *Visa, Passport, Consular
Services/Technology/Administrative***

Analyst: Oyebola Owolabi

Date: August 14, 2026

Confidentiality Notice

This report contains defensive cyber threat intelligence derived exclusively from publicly available open-source information (OSINT). It is prepared strictly for educational and analytical purposes and does not include exploitation, intrusion, or unauthorized access activities.

Table of Contents

1. Executive Summary

2. Organization Profile

2.1 Organization Overview

2.2 Digital Footprint Summary

3. Intelligence Requirements & Scope

3.1 Intelligence Objectives

3.2 Scope & Limitations

4. Methodology & Tools Used

4.1 OSINT Methodology

4.2 Tools Utilized

5. OSINT Collection Summary

6. Key Findings & Exposures

6.1 Phishing & Brand Impersonation

6.2 Infrastructure Exposure

6.3 Data Leakage Indicators

7. Threat Analysis & Risk Assessment

7.1 Threat Actor Perspective

7.2 Business Risk Impact

8. Evidence Log

9. Mitigation & Recommendations

10. Conclusion

11. Ethical Considerations & Disclaimer

12. References

13. Appendices (Optional)

A. Screenshots of Findings

B. OSINT Tool Outputs

C. IOC Summary (Domains, URLs, IP Addresses)

D. MITRE ATT&CK Mapping

1. Executive Summary

This report presents the findings of a proactive, OSINT-driven threat intelligence investigation into publicly exposed cyber threats targeting VFS Global.

The Cyber Threat Intelligence (CTI) team conducted structured collection across search engines, passive DNS/email harvesting, internet-wide scanning, historical web archives, and breach-intelligence sources during the current reporting period. The investigation did not identify any suspicious activity that could threaten the integrity of global.

All indicators were cross-validated using publicly available tools and none were assessed as high-confidence threats. There is no evidence of compromised VFS-related credentials identified in public breach repositories during this period. Overall, VFS Global's core public-facing infrastructure shows no signs of unauthorized exposure or misconfiguration. However, the organisation must be wary of brand-impersonation infrastructure and continue to track this through recurring OSINT sweeps.

2. Organization Profile

2.1 Organization Overview

VFS Global is a third-party organisation. It is the world's largest visa outsourcing and technology services specialist for governments and diplomatic missions worldwide. The company manages the administrative and non-judgmental tasks related to visa, passport and consular services for its client governments. This enables them to focus entirely on the critical task of assessment.

The organisation's core digital offerings include web apps, mobile app, customer portals and its website.

2.2 Digital Footprint

The organisation's primary domain is www.vfsglobal.com. It is active on Instagram (**vfsglobalofficial** -118k followers); LinkedIn (**vfs Global** -267k followers); facebook (**vfs Global** -473k followers) and X (**@vfsglobalcare**- 141.4k followers).

3. Intelligence Requirements & Scope

3.1 Intelligence Objectives

This project aims to gather security intelligence on the digital services offered by VFS Global, by answering the following questions:

- Are there phishing or brand impersonation threats targeting VFS global?
- Are there exposed assets attackers could leverage?
- Is VFS's brand being abused for fraud?

3.2 Scope & Limitations

The scope of this project is limited to the following:

- Passive OSINT only (no scanning, bruteforce or exploitation of public data)
- Publicly available data sources
- Tools used within ethical boundaries

4. Methodology & Tools Used

4.1 OSINT Methodology

This engagement used passive, open-source intelligence (OSINT) techniques only. No systems were accessed and no exploitation was performed. The methodology followed a liner direction of:

1. Planning & Direction
2. Collection
3. Processing
4. Analysis
5. Dissemination

4.2 Tools

The following are tools used for each phase of this project and their purpose are defined as such.

- Google Dorks – discovery of exposed files and pages
- theHarvester – email and subdomain enumeration
- Sublist3r
- VirusTotal – reputation and indicator validation
- AbuseIPDB – IP reputation analysis
- Wayback Machine – historical web analysis
- MXToolbox – email security posture

5. OSINT Collection Summary

Step 1 - Planning & Direction- Intelligence Requirements & Source Mapping

This section will answer the following questions:

- Are there phishing or brand impersonation threats targeting VFS global?
- Are there exposed assets attackers could leverage?
- Is VFS's brand being abused for fraud?

The OSINT framework will be used to identify which tool will be used to answer each of the Priority Intelligence Requirement (PIR) above.

Intelligence Requirement	OSINT framework category	Tool
Impersonating domains	Domain Name> Certificate Search Engines> Google Search	Google Dorks
Exposed Emails and subdomains	Email Address>Email search>theHarvester>domain name>subdomains	theHarvester Sublist3r
Breach exposure/intelligence	Email address>breach data	Have I been Pwned

Step 2 – Intelligence Collection: Search and Email/Subdomain Intelligence

Tools: Google Dorks, theHarvester, Sublist3r

This section uses search-engine operators and theHarvester to collect publicly exposed emails, subdomains, hosts and indexed documents tied to VFS Global's public footprints.

Google Dorking

Dork 1 - Site:vfsglobal.com

Lookalike domains:

<https://mohesr.vfsglobal.com>

<https://visa.vfsglobal.com>

Dork 2 – inurl:vfsglobal.com

<https://canadaonline.vfsglobal.com> : Canadian domain

<https://euonline.vfsvis.com> – apparently for EU countries but suspicious

<https://online.vfsevisa.com> - e-visa registration site

<https://roe4.vfsglobal.com> – (IHCUS postal appointment) suspicious

Dork 3: filetype:pdf “vfsglobal” “security”

<https://www.vfsglobal.com>pdf>vfs-global-corporate-privacy-notice>

https://www.vfsglobal.com/en/pdf/VFS_Global_Third_Party_Code_of_Conduct_v1.3.pdf

<https://visa.vfsglobal.by/blr/en/ita/assets/pdf/data-transfer-notice-engl.pdf>

Dork 4: intitle: “vfsglobal” inurl:login -site:vfsglobal.com

Dork 5: site:Pastebin.com “vfsglobal.com” – none detected

Dork 6: intext: “vfsglobal” filetype:xls or filetype:csv – none detected

Exposed Emails and subdomains

Command 1 -theHarvester -d vfsglobal.com -b all – (none detected)

Command 2 – theHarvester -d vfsglobal.com -b brave, yahoo (specific sources) -vfsservicesus@vfsglobal.com

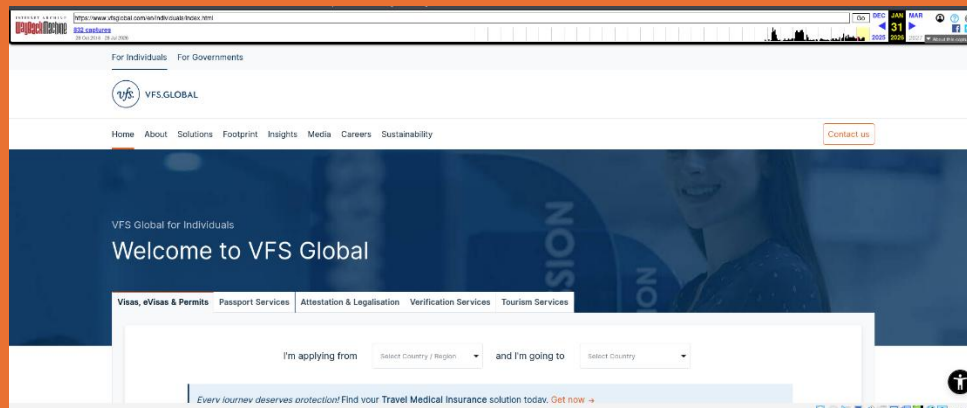

Step 3. Processing: Indicator Validation | Noise Reduction: Validate indicators and remove false positives

Tools: Shodan and wayback machine

3.1 Wayback Machine – Historical Infrastructure Review

Old landing web page of vfsglobal.com : January 15, 2015

New and current landing page of vfsglobal.com

Step 4 - Threat Analysis: Attacker Intent & Infrastructure: Identify attacker intent, techniques, and infrastructure.

4.1 – Indicator, Reputation and Breach Validation

Tools: Virus total, AbuseIPDB, Have I been Pwned

Virus Total: domain/IP/URL reputation

Vfsglobal.com – clean 0/91

<https://mohestr.vfsglobal.com> 0/95

<https://visa.vfsglobal.com> -clean 0/92

AbuseIPDB – IP reputation

Vfsglobal.com – 13.33.67.60. 0% confidence. Never been reported

<https://mohestr.vfsglobal.com> -104.18.37.49. 0% confidence. Never been reported

<https://visa.vfsglobal.com> - 104.18.37.49. 0% confidence. Never been reported

Have I been Pwned – Breach Exposure

vfsservicesus@vfsglobal.com – no breach

Validation Summary Table

Indicator	Type	VirusTotal	AbuseIP	Verdict	
Vfsglobal.com	Domain	0/91	0%	Never been reported - legitimate	
visa.vfsglobal.com	Sub-domain	0/92	0%	Never been reported - legitimate	
vfsservicesus@vfsglobal.com	Email	N/A		0 data breaches	
104.18.37.128	IP address	0/91	0%		

6. Key Findings & Exposures

After an investigation of the vfsglobal publicly available data, as well as digital footprints, it was discovered that the organisation has a strong digital security system. Nevertheless, certain suspicious URLs were found online which could not be verified after multi-level investigative protocols were undertaken.

6.1 Phishing & Brand Impersonation

After a search of theHarvesters using the general and specified searches (brave, yahoo), 37 URLs were discovered, 161 IP addresses, one email address, 636 hosts, and another 7 hosts (brave, yahoo). Some of the URLs discovered are owned by countries since VFS is a third-party service provider to countries. Each country has its own sub-domain of the actual vfsglobal domain. Thus, there appears to be no particular concern for phishing and brand impersonation.

There was no phishing themes observed, no look-alike domains, and no fake login pages or cloned content.

6.2 Infrastructure Exposure

Some publicly visible vfsglobal services include passport services (passport.vfsglobal.com), visatracking.vfsglobal.com, among others.

6.3 Data Leakage Indicators

There were no exposed documents, neither were there breached or leaked email addresses.

7. Threat Analysis & Risk Assessment

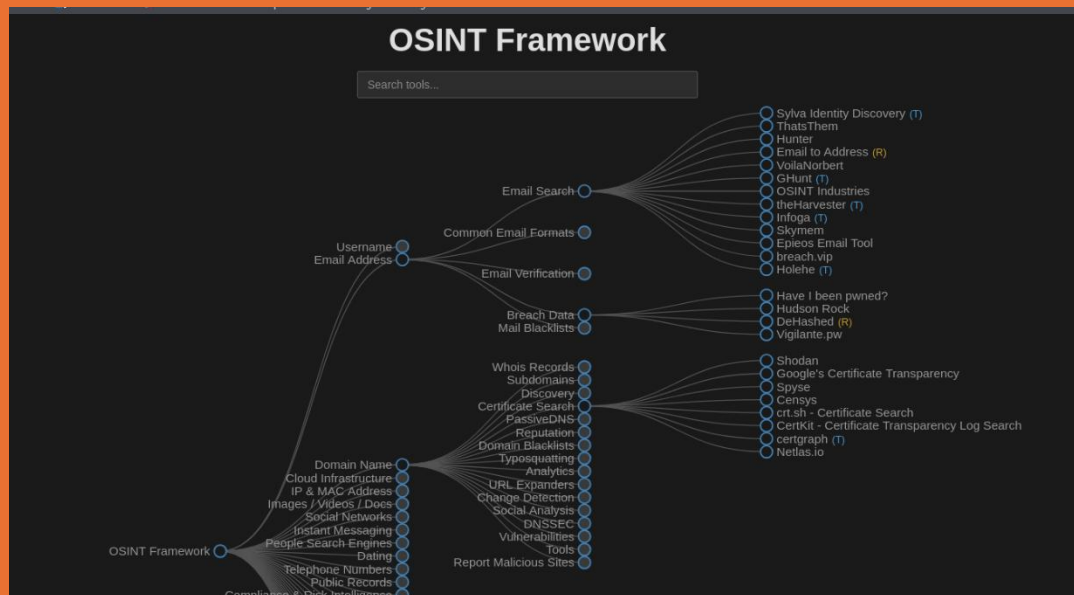

7.1 Threat Actor Perspective

Although there seems to be no immediate security breach or threat to vfsglobal, threat actors could take advantage of the multiple individual country domains for phishing and impersonation.

7.2 Business Risk Impact

In the case of an attack, vfsglobal could face financial risks in that proceeds that should normally go to the organisation would be diverted to attacking entities. It will lose its reputation as a trustworthy ally of multiple countries and international agencies; it will lose customers and be fined for not complying with regulatory laws.

8. Evidence Log

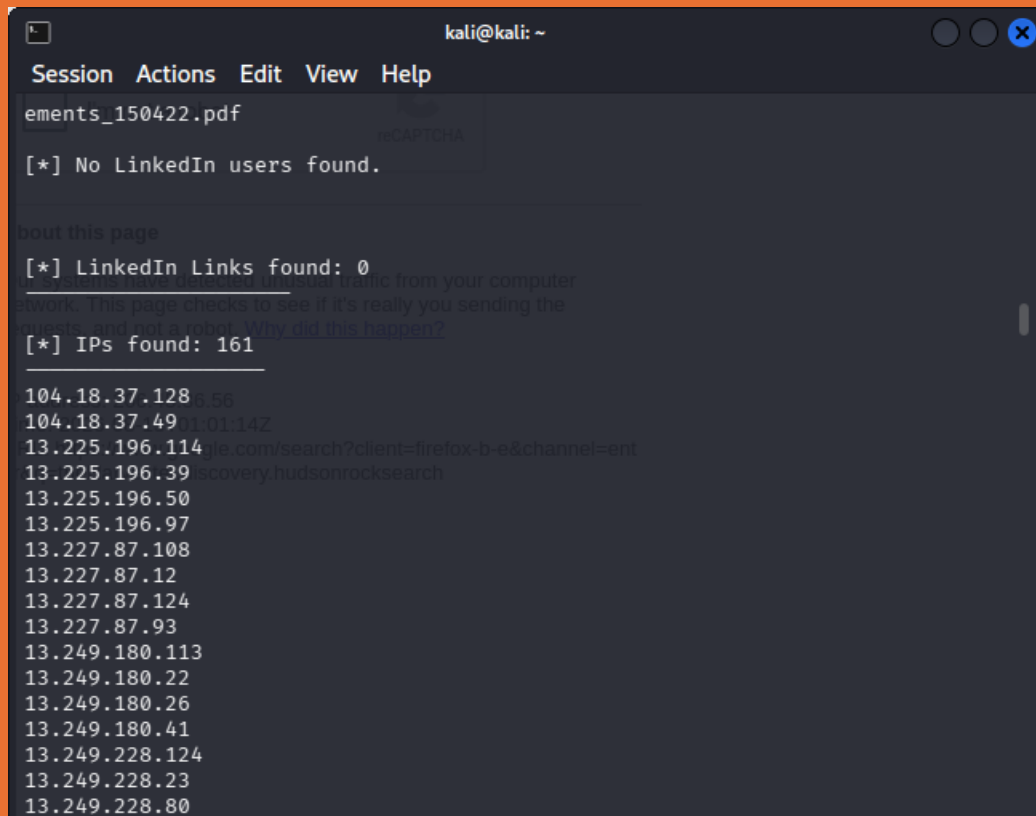

OSINT framework

Step 2

Command theHarvester -d vfsglobal.com -b all (full passive sweep across all sources)

1 email found yfsservicesus@vfsglobal.com

161 IP addresses, 37 URLs and 636 hosts

AbuseIPDB – IP reputation

<https://moheSr.vfsglobal.com> -104.18.37.49. 0% confidence. Never been reported

Have I been Pwned – Breach Exposure

vfsservicesus@vfsglobal.com – no breach

9. Mitigation & Recommendations

The following recommendations are advised to further secure vfsglobal's brand identity and infrastructure from unwarranted attacks:

- Block/monitor validated malicious domains and IPs at the proxy/firewall layer
- Register or monitor for close typosquat variations of vfsglobal.com
- Alert on newly observed certificates referencing "vfsglobal" outside its known infrastructure
- Rotate or flag any exposed credentials confirmed in breach data
- Schedule recurring OSINT sweeps (e.g. weekly) to catch newly registered phishing infrastructure early

10. Conclusion

This engagement confirms that vfsglobal could be an active target for brand-impersonation and phishing campaigns. Though no threats were identified in this investigation, it is still very necessary to implement actions to keep the security as such. Vfsglobal's core infrastructure shows no signs of unauthorized exposure or misconfiguration. Findings and supporting evidence have been handed off to the SOC team for monitoring, and a recurring OSINT collection cadence is recommended to maintain visibility into new phishing infrastructure as it emerges. Summarize:

11. Ethical Considerations & Disclaimer

- All data collected was publicly available
- No active scanning or exploitation conducted
- Analysis performed for educational and defensive purposes only
